Disk Florets

The outer circumference of the flower head.

In the center of the flower that makes delicious seeds.

The seed's outer layer or wall.

The entire head of the sunflower.

This supports the plant and leaves and transports water and nutrients around the plant.

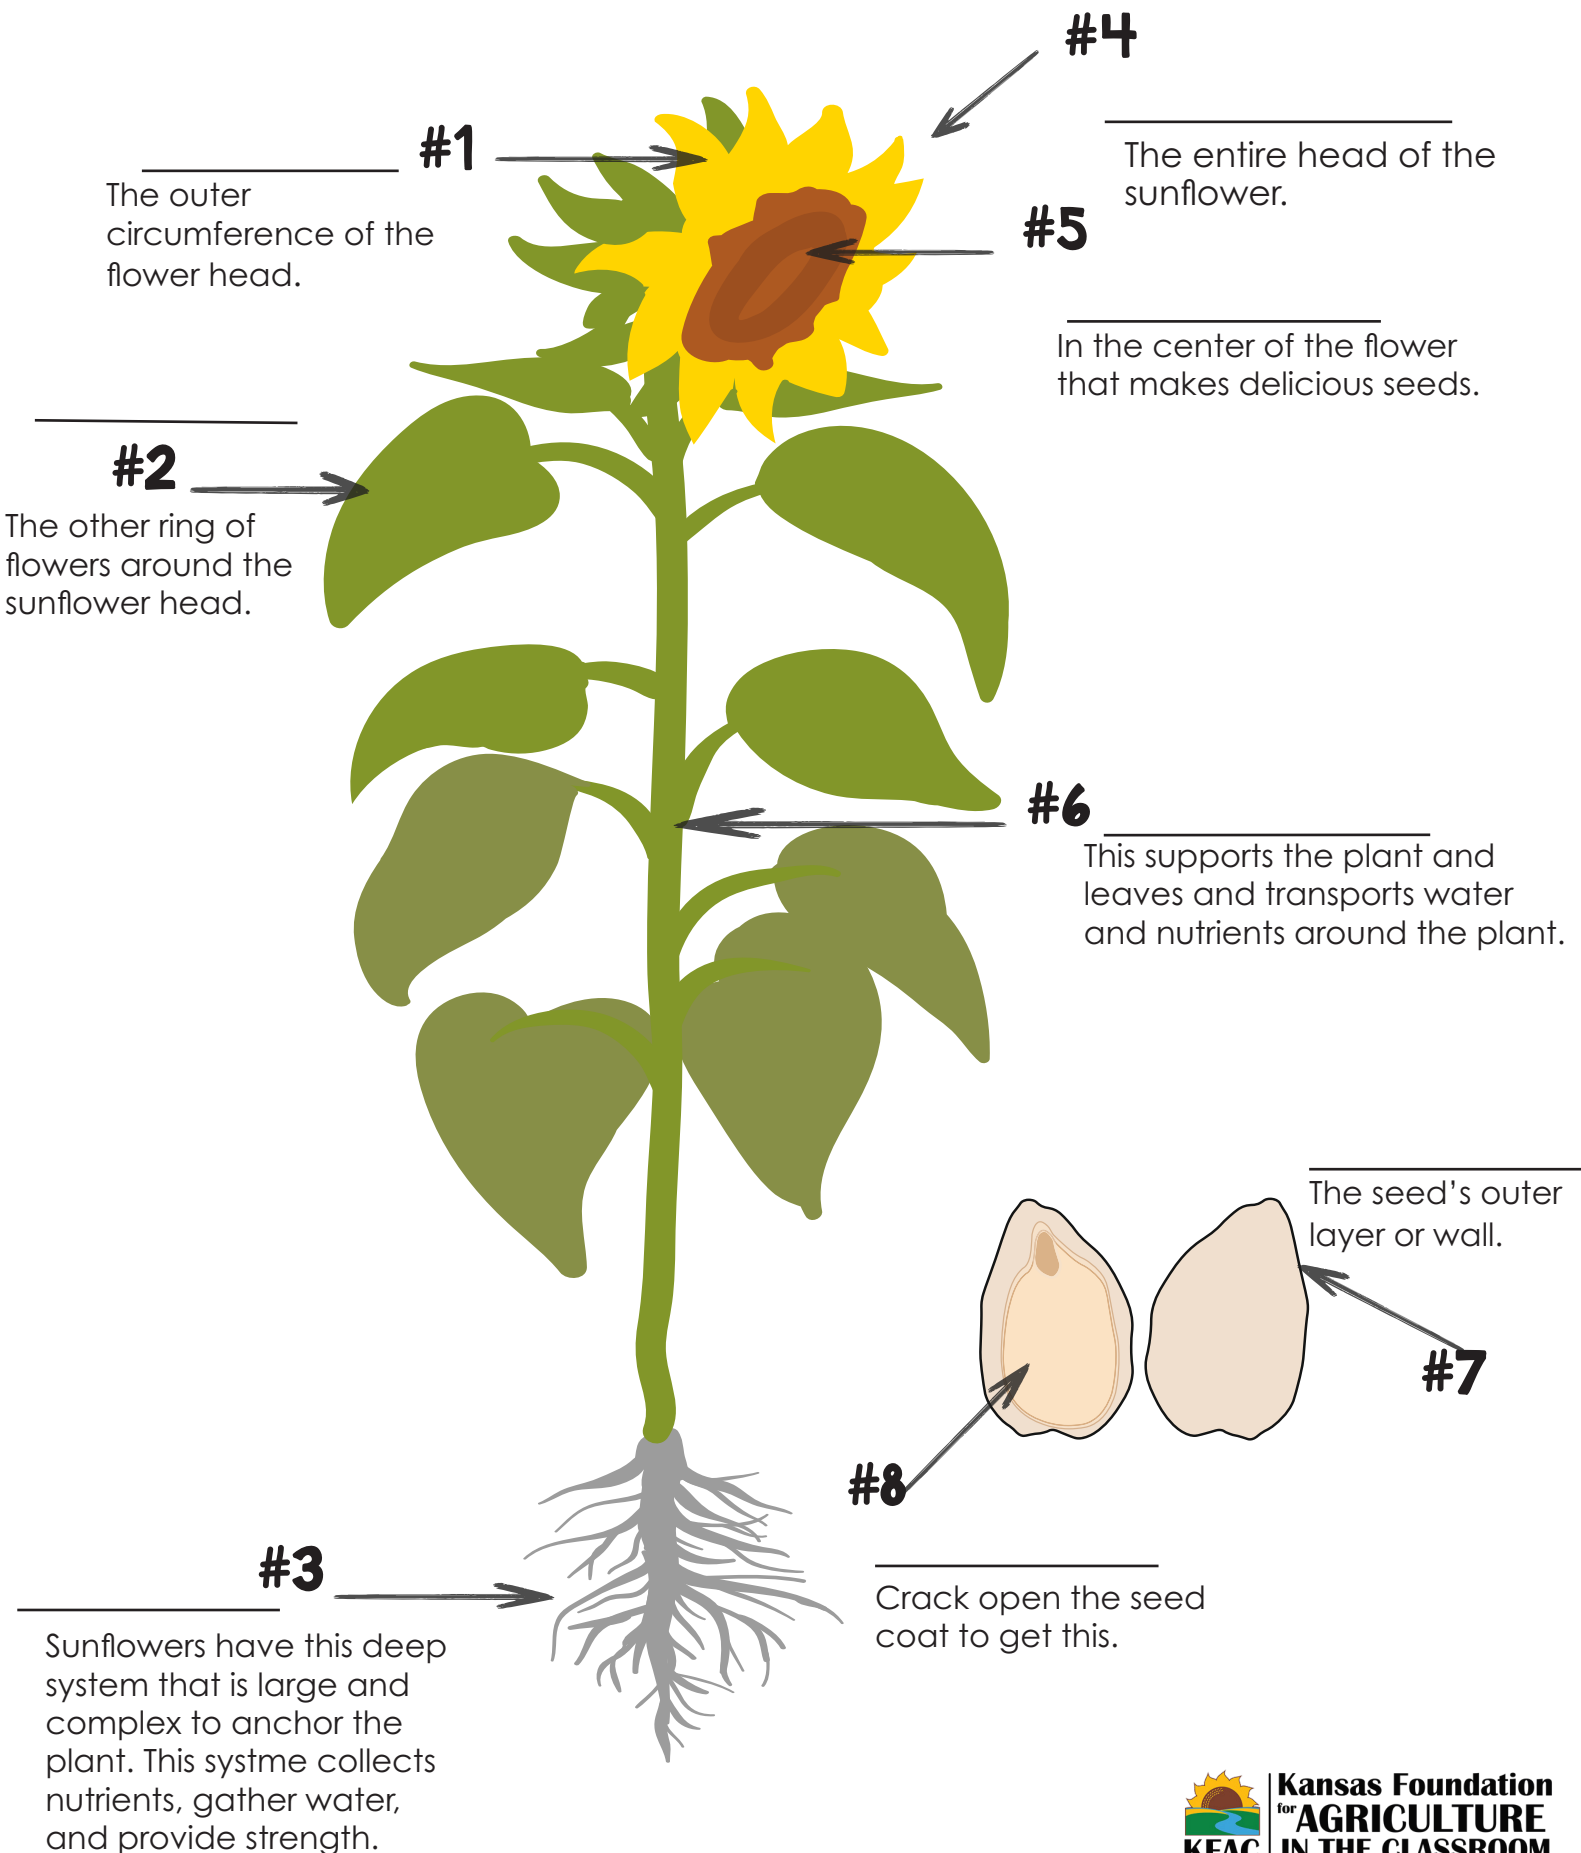

Crack open the seed coat to get this.

Sunflowers have this deep system that is large and complex to anchor the plant. This system collects nutrients, gather water, and provide strength.

The other ring of flowers around the sunflower head.
