

A grafted pecan tree is planted in an orchard.

After 7 years, the pecan tree starts producing nuts.

During the harvest, the farmer shakes the trees to knock the pecans off the branches.

The farmer sweeps the pecans into a windrow.

The harvester picks up the pecans and blows the sticks and leaves out of the way.

The pecans are taken to a cleaning and shelling plant.

The pecans are packaged and ready to be sold.

The pecans are bought and ready to be eaten or baked into a pie.
