

Agricultural Landscapes

Game Instructions:

1. Place the stack of *Agricultural Landscape* images in the center of your desk/table.
2. Shuffle the *What If...?* cards, divide them equally among the group, and have each player place them face down in front of them.
3. Begin with the first *Agricultural Landscape*. Read the card indicating the food product, the top-producing state in the United States, and study the farm landscape.
4. Each player will then flip over one *What if...?* card. Think about the hypothetical information in the geography of this food and research if necessary. Determine one of the following results:
 - a. No impact
 - b. Increased difficulty to produce food
 - c. Farm would no longer exist
5. Continue taking turns flipping over *What if...?* cards and determining the hypothetical result.
6. Continue the process until you've progressed through all of the *Agricultural Landscape* cards.

*Florida
is the top-producing state for
Oranges*

*California
is the top-producing state for
Strawberries*
