The forestry industry plays a significant role in providing various products and services that are important to everyday living. The percentage of trees that are farmed, also known as cultivated or managed forests, can vary significantly by region and the specific type of forest. The term "farmed trees" typically refers to forests and tree plantations that are actively managed for commercial purposes, such as timber production, pulpwood, or other forest products.

# My Agricultural Connections

The agricultural industry produces our necessities like food, clothing, and shelter. Agriculture also produces ornamental goods like the trees, shrubs, and flowers we have in our landscapes. Cut flowers used in bouquets and arrangements also come from the agricultural industry.
