

From Farm to Freezer

Dairy cows are milked twice a day.

The milk is piped into a cooling tank.

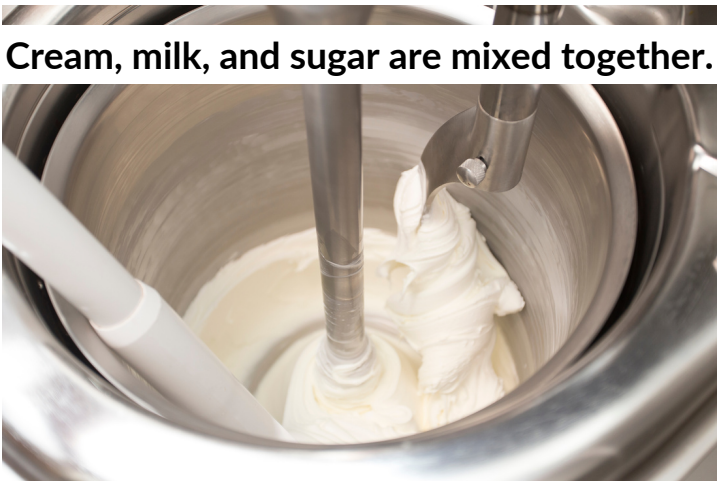

The milk is piped into a milk truck and delivered to the ice cream factory.

The cream and milk are separated from each other.

Cream, milk, and sugar are mixed together.

The mixture is pasteurized and homogenized.

The mixture is pumped into a freezer with spinning blades that force air into the mix.

Flavors are added to the ice cream.

The ice cream is packaged into containers.

The ice cream is shipped to stores in refrigerated trucks.
