La Agricultura Es...

The changing demographics of American society were a large reason the Ag in the Classroom program was created. Population movement from rural to urban areas meant fewer and fewer people were involved in production agriculture.

Over the years we have reached the point where very few students have any real connection to farming and ranching. Families three to five generations removed from any type of agricultural ties are not uncommon.

By incorporating agricultural and nutritional information into core curricula in subjects such as math, reading, language arts, science and social studies, the Ag in the Classroom program is helping educate tomorrow's leaders about their food and fiber system and its importance in their lives.

Another change in our demographics has prompted this bilingual Ag in the Classroom lessons book. Increasingly our classrooms have a larger Hispanic population which prompted Oklahoma and New Mexico to work together to bring you these lessons in Spanish as well as English.

Made possible by a grant from the National Ag in the Classroom Consortium and funded by the United States Department of Agriculture, the lessons presented in this book are designed to allow students from both cultures to become more agriculturally literate citizens.

Ag in the Classroom lessons use agriculture-related activities and research-based background material to teach National Standards in language arts, math, science, reading, social studies and visual arts.
