

Feeding Cows: Step by Step

STEP #2:
Ingredients are placed in the mixer wagon containing a scale, this way the farmer can measure out the correct amount of each. A cows diet depends on her age and stage of lactation.

STEP #4:
The tractor and mixer wagon are driven into the barn and the TMR is evenly distributed in front of the cows. Cows are fed 2-3 times per day and will eat for up to 8 hours per day.

STEP #1:
Enough feed for the day is shaved off the bunk. This reduces spoilage & waste.

STEP #3:
When all of the ingredients have been added, the mixer wagon is turned on and the augers blend the feed until it becomes a TMR (Total mixed ration).
